

Invista Antron® Legacy Nylon

Performance begins with the fiber.

Lees Broadloom and Modular carpets use Antron® Legacy 6,6 nylon fiber.

Antron® Legacy nylon demonstrates superior soil resistance and unsurpassed appearance retention. Antron® fiber is a square four hole hollow filament shape offering two unique properties that lend incredible soil hiding and soil-resist benefits.

In addition to preserving the beauty of the carpet, soil hiding and soil-resist properties offer environmental benefits as well -- vacuuming is more effective and the carpet does not have to be cleaned as often because it retains a cleaner appearance.

Antron® is third party certified as an Environmentally Preferable Product. Combining Antron® with EPP certified Unibond backing makes Lees Broadloom carpets the only carpets that are EPP certified from top to bottom. Antron® is available with recycled content and can be recycled.

Performance Benefits:

- * Invista Antron® Legacy Nylon is the industry's premier soil-resist fiber.
- * Unsurpassed resiliency.
- * The four hole hollow filament shape of Antron® scatters light for optimal soil hiding.
- * Square shape of the fiber prohibits soil build-up and allows for easier cleaning.
- * Duratech® soil release lasts three times longer than competitors.
