

INVISTA® LEGACY

Invista Antron® Legacy™ nylon, and Invista Antron Lumena® solution-dyed nylon fibers begin with the four basic components of all Antron fibers: Type 6,6 polymer, fiber engineering, Invista chemistry and product certification. In addition, Invista engineers both of these brands for specific commercial performance requirements.

Antron Legacy nylon

Defies the effects of heavy traffic and soil.

High-traffic environments that are susceptible to heavy soiling, such as corporate offices, airports, and schools, require a carpet fiber that will stand up to the challenge. Antron Legacy provides unsurpassed soil resistance that keeps your carpet looking newer longer.

Antron Legacy fibers are engineered to minimize soil-trapping crevices, and are protected with patented DuraTech™ soil-resistance technology. Additionally, Antron Legacy fibers feature built-in antistatic protection to minimize shock.

Antron Legacy offers the broadest range of commercial carpet styles and textures available. In fact, because more carpet styles are made from Antron Legacy than from any other brand of carpet fiber, you can enjoy virtually unlimited design possibilities.

Antron Legacy nylon is the right choice if:

- The commercial space is a high-traffic area
- Soil is one of the biggest concerns
- Performance and styling flexibility are equally important

Plus, you're covered with:

- A 10-year abrasive wear warranty
- Life-of-carpet antistatic protection
